Cystoscopy is changing.
PrimeSight™ helps you achieve more with less.

» Increased capacity with less endoscopes
» Increased productivity with less wasted time
» Increased sterility with less complexity
Increased Capacity // Less Cystoscopes

The demand for cystoscopy has never been greater. So, how does a busy urology facility keep up? With the PrimeSight™ system, the answer isn’t more scopes or more staff. Instead, PrimeSight offers triple the procedure capacity of conventional systems, allowing you to do more with less.

» Easily Increase Your Capacity
   Adding three procedures a day results in nearly $200,000 more in annual revenue. Would you like to add even more? With PrimeSight, it’s possible.

» Less Capital and Service Costs
   One PrimeSight cystoscope replaces three conventional cystoscopes providing significant capital savings and a reduction in ongoing service costs.

Increased Productivity // Less Wasted Time

Are your cystoscopes always in reprocessing when you need them? Do you transport dirty scopes because your facility isn’t equipped to deal with conventional reprocessing? It doesn’t have to be this way. The PrimeSight system facilitates quick and easy reprocessing between cases without the need for high level disinfection (HLD) or an automated endoscope reprocessor.

» Boost Staff Productivity
   The PrimeSight system saves about 30 minutes per cystoscope in reprocessing time. With less staff time needed for reprocessing, you can reallocate resources to more patient-centric activities such as room turnover and patient intake.

» Less Delays and Wasted Time
   With the PrimeSight system, lengthy reprocessing won’t slow you down. Instead reprocessing between cases takes mere minutes and can be completed in virtually any facility. So, it’s easy to stack procedures or add last-minute cases.
Increased Sterility // Less Complexity

Endoscope safety continues to make headlines. In fact, inadequate cleaning of flexible endoscopes is consistently one of the top 10 Health Technology Hazards cited by the ECRI Institute. Even careful adherence to reprocessing guidelines for sterilization or high level disinfection does not guarantee safety. The EndoSheath® protective barrier addresses these issues head-on by providing a sterile, single-use solution that is FDA-cleared and included in the 2015 ANSI/AAMI National Standards on Endoscope Reprocessing in Health Care Facilities.

» A Proven, Sterile Solution
EndoSheath is proven effective as a microbial barrier against organisms as small as 27 nanometers per FDA guidance and testing. In 25 years of clinical use, there has never been a reported case of patient-to-patient cross contamination.

» Compliance With Less Complexity
The channel, seals and ports are part of the sterile, single-use EndoSheath. Instead of cleaning, flushing and disinfecting these hard-to-clean areas, you simply replace them. With fewer reprocessing steps and less chemical exposure, EndoSheath makes compliance easier on your practice and staff.

Sterile Cystoscopy Solution for Every Patient

The single-use EndoSheath protective barrier includes the channel, ports, and seals. EndoSheath is used with the D-shaped PrimeSight cystoscope.

Prior to each procedure, the PrimeSight cystoscope is inserted into the sterile EndoSheath barrier. Together they form a fully functional cystoscopy system.

Included in the AUA/SUNA White Paper: Reprocessing of Flexible Cystoscopes
1. Based on Medicare National Reimbursement of $208.00 for CPT Code 52000, General Endoscopy.

Rx Only. The Innovative PrimeSight™ System

The PrimeSight System offers the convenience and safety of a disposable along with the superior functionality of a reusable. The urology line includes PrimeSight fiberoptic and video cystoscopes, the single-use EndoSheath® protective barrier, and a variety of peripherals.

PrimeSight™ Cystoscopes

» Uniquely designed for use with the EndoSheath protective barrier
» Fiberoptic or video-based
» Standard or intuitive articulation

EndoSheath® Protective Barrier

» Available exclusively for PrimeSight systems
» Sterile barrier, channel, ports, and seal for every case
» Two channel size options: 1.5mm for diagnostic or 2.1mm for a full range of procedures
» Eliminates the need for HLD between patients

PrimeSight™ Digital Processing Unit

» Compact, all-in-one system is easily transported between exam rooms and facilities
» Full screen, vibrant CCD-based imaging with integrated illumination and LCD display
» Video & audio recording, review, and archive
» Workflow simplicity tools such as Patient Day List
